

Project Progress Report -4

TAG-Personalized Car Finance Advisor

Name: Gireeshwar Chowdary Gangarapu

Student ID: 02081655

Email: Gireeshwarchowdary_Gangarapu@student.uml.edu

What Am I Proud about:

This week, we made some big strides in our project. First off, we modified some features in the homepage that are easy for users to navigate. We also added data so on submitting the enquiry page by users now the data is generated as a form for users on submitting their inquiries. When someone fills out the form, the information they provide is now securely stored using Firebase. And results on cars according to the user requirements popped up on submitting. On top of that, we set up a login page. This makes our app more secure and allows users with accounts to log in easily. We believe in making our app safe and personal for each user, and the login page is a big step in that direction.

Details:

Important project elements, such as the Homepage, About Pages, and User Preference Inquiry Page, have been developed successfully. Together, these elements enable consumers to personalize their choices for automobile models and learn more about the history and goals of our platform. A dedication to giving customers up-to-date, dynamic information on automobile models and prices is demonstrated by the integration of Firebase for data storage. We have created a platform that is both instructive and adaptable to users' changing preferences by finishing the data collection and loading procedure. We also have a subscribe option and contact option to make it user-friendly.

Next Steps:

We intend to modify and update any crucial features to the existing development.
